# Alpaca

## NATURAL OUTDOOR SOCKS

Softness, fineness and its high-grade gloss have made alpaca wool very popular.

Alpaca provides a comfort comparable to cashmere. The alpaca fiber has good insulating and thermal regulating properties. It is very soft and is supple on the skin. The shiny yarn is more durable and much warmer than sheep's wool.

The reason for this is their home the South American Andes. Alpacas live at altitudes of up to 5,000 meters. There are extreme weather conditions, which the alpacas defy. Because their wool protects well against cold, wind, dampness but also against extreme heat. The wool of the alpaca is therefore perfectly suitable for both summer and winter clothes.

The fiber is one of the finest natural fibers besides cashmere and silk. In their homeland they therefore called alpaca fabrics "the fleece of gods" and was then exclusively reserved for the nobility.
